

Project Pi

EDUCATIONAL CHILDREN'S

PROJECT IDEA/BACKGROUND

THE PROBLEM

- Environmental education often feels passive and overwhelming
- Learners struggle to connect with ecosystems they've never explored
- Low engagement leads to

OU

- People discover told
- Curious strong

PRODUCT & OPPORTUNITY

OUR APPROACH

- Interactive exploration of a single ecosystem
- Sticker-book style discovery of animals and resources
- Short, digestible conservation facts

WHY THIS WORKS

- Encourages curiosity and self-paced learning

THE

- I
- V
- I
- I

THEO

- Gr
- le

REASONS

- To educate about conservation
- To create an engaging intera

IMPACT

- Now, kids learn conservation mostly through passive info (reading/videos)
- Our project will create an interactive, choice-based way to learn conservation through play
- Build early awareness of freshwater wildlife and threats
- Encourage responsible choices (cleaning pollution, sustainable fishing)
- Make conservation of Saskatchewan ecosystems feel local and achievable

WHO?

- Elementary-aged children (ages 5–9)
- Primary setting: Saskatchewan classrooms and homes
- Learn through interactive play and exploration
- Collect animals in a sticker book to identify them
- See how choices (cleaning trash, fishing decisions) affect the ecosystem and animal populations

ENVISIONED PROJECT

- Simple 2D Game
- Designed for elementary school age children
- Teaches about freshwater ecosystems and animal conservation through the active discovery

ENVISIONED PROJECT

- Background: Section view of a freshwater ecosystem

ENVISIONED PROJECT

- Background: Section view of a freshwater ecosystem
- Animals will populate the area

ENVISIONED PROJECT

- Background: Section view of a freshwater ecosystem
- Animals will populate the area
- Once clicked, the animal will be added to the user's sticker book

ENVISIONED PROJECT

- Background: Section view of a freshwater ecosystem
- Animals will populate the area
- Once clicked, the animal will be added to the user's sticker book
- Sticker book: will only contain the name and outline of an animal until it is discovered.

ENVISIONED PROJECT

- Background: Section view of a freshwater ecosystem
- Animals will populate the area
- Once clicked, the animal will be added to the user's sticker book
- Sticker book: will only contain the name and outline of an animal until it is discovered.
- Events that affect animal populations

CONSTRAINTS AND LIMITATIONS

- Inexperience
 - In creating games
 - In visual art
- Lack a great understanding of fresh
- Knowledge and skills of our audience
- Chosen programming environment
- Model View Controller (MVC) architecture
- Domain-driven design

Thank you
