

STAKEHOLDER ENGAGEMENT PLAN

Project Name Ecosystem Discovery Application

Name	About the Stakeholder	How to Engage the Stakeholder
------	-----------------------	-------------------------------

Elementary
School Children
(Ages 7–9)

- The intended end user of the application
- Will use the application to learn about Saskatchewan freshwater animals through interactive gameplay
- Engages with the system through a hint-based game, sticker collection, and educational videos

Provide Information:

To effectively engage this stakeholder, attention must be paid to:

- How easily they understand and follow the game flow
- How intuitive the hint-based gameplay is
- Whether animations and visuals maintain engagement
- Whether they understand feedback (correct/incorrect actions)
- If the sticker reward system motivates continued interaction

To validate engagement, usability testing and observation of interaction patterns should be conducted.

Elementary
School Teachers

- Secondary Users
- May utilize the project in classrooms for student education and/or entertainment

Provide information:

- What the application is and its purpose
- How the gameplay supports learning outcomes
- How the system can be used in a classroom setting
- The type of ecological knowledge provided
- How videos and interactive elements reinforce learning

If teachers are involved with evaluation:

- Explain learning objectives
- Demonstrate how gameplay supports understanding.
- Show how the system can supplement teaching

Communication can primarily be conducted through email or demonstration sessions.

- Direct communication with teachers should primarily be done through email

Parents & Guardians	- Secondary Users - May utilize the project at home for child education and/or entertainment	Provide information: • What the application is and how it works • The educational purpose of the game • How children interact with the system • Why the application is beneficial for learning • The simplicity and safety of the application (no login, no external risks) If involved in evaluation: • Demonstrate how children use the system • Explain gameplay and learning outcomes • Show how the system encourages exploration and learning Communication can primarily be conducted through email or informal demonstrations.
Class Instructor (Tim Maciag)	- Academic evaluator - Project sponsor - Has set the overall project requirements and deliverables	Meet requirements: • Ensure all deliverables align with course expectations • Follow MVP constraints and scope guidelines • Maintain proper documentation and GitHub structure Provide Updates: • Progress reports and presentations • Demonstrations of working features • Reflection on design decisions The instructor may provide: • Feedback on project direction - • Guidance on design and implementation

Development Team (Jeremiah, Rayansh, Aubin, Abrianna)	- Designers and developers of the system	Meet requirements: • Collaborate on system design and implementation • Maintain consistent coding practices and MVC structure • Ensure integration between frontend and backend (Supabase) • Follow GitHub workflow and task tracking Communication: • Regular team meetings and updates • Coordination through GitHub and shared tools • Continuous feedback and issue resolution
School Administration	- Secondary User - Potential Institutional adopter	Provide information: • What the application is and how it works • Educational benefits and learning outcomes • Suitability for classroom use • Safety and simplicity of the system If considering adoption: • Explain how the system supports learning goals • Demonstrate ease of use and accessibility Communication can be conducted through formal presentations or reports.
