

## PROJECT ROLES AND RESPONSIBILITIES

**Project Name** Ecosystem Discovery Application

| Name | Role | Responsibilities |
|------|------|------------------|
|------|------|------------------|

|                  |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Rayansh Chowatia | Technical Lead / Frontend & Integration Lead / GitHub Manager | <ul style="list-style-type: none"><li>• Lead overall system architecture alignment with MVC principles</li><li>• Design and implement the interactive ecosystem UI (2D animated scene)</li><li>• Implement sticker-book interface and discovery flow logic</li><li>• Integrate frontend interactions with the data model (JSON/local Storage or database)</li><li>• Manage GitHub repository structure, branching, commits, and documentation updates</li><li>• Ensure scope control (single ecosystem, 6–8 animals, age 7–9 focus)</li><li>• Maintain consistency across all project documents and README</li><li>• Coordinate technical integration between team members</li></ul> |
|------------------|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                  |                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Jeremiah Onunkwo | Backend & Data Model Lead | <ul style="list-style-type: none"><li>• Design and structure animal data schema (name, habitat zone, description, source references)</li><li>• Implement data storage logic (JSON structure / local Storage / lightweight database)</li><li>• Handle persistence of user discovery progress</li><li>• Support controller logic for discovery flow integration</li><li>• Ensure data accuracy and validation of educational content</li><li>• Assist with backend-related debugging and performance optimization</li></ul> |
|------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                    |                                |                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Abrianna Primavera | Visual Design & UI Review Lead | <ul style="list-style-type: none"><li>• Design child-friendly visual style (color palette, layout consistency, typography)</li><li>• Review ecosystem UI for readability and age appropriateness (ages 7–9)</li><li>• Ensure visual consistency across ecosystem scene and sticker-book interface</li><li>• Assist in selecting or refining 2D illustrated assets</li></ul> |
|--------------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                    |                                    |                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                    |                                    | <ul style="list-style-type: none"><li>• Provide usability review feedback before MVP submission</li></ul>                                                                                                                                                                                                                                                                  |
| Aubin Chriss Izere | Interaction Support & Testing Lead | <ul style="list-style-type: none"><li>• Assist in implementing interaction features (click handling, navigation flow)</li><li>• Support integration between UI and backend logic</li><li>• Conduct structured testing of discovery flow and navigation</li><li>• Document bugs and assist in debugging</li><li>• Support demo preparation and final presentation</li></ul> |
